

MITSUI & CO.

MITSUI PLASTICS, INC.

Resealable Film

For Food Packaging & Consumer Goods Applications

Mitsui Plastics offers a special hot melt compound for reclosable packaging based on styrene block copolymers. Its excellent tack allows high peel forces even during multiple peels. The free-flowing pellets are easy to handle during processing and due to its low MFR it has a high melt stability. It is particularly recommended for blown and cast film co-extrusion production and is also suitable for extrusion coating technology.

Benefits:

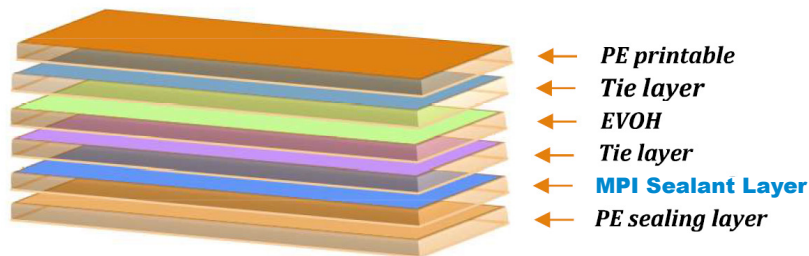

- Reclose functionality in multi-layer film structures.
- Excellent reclose properties up to 10 openings.
- Suitable for extrusion coating and co-extrusion.
- Easy processing.
- Suitable for blown film and cast film technology.
- Food contact approved.

Applications:

Easy-to-handle and easy-to-process hot-melt adhesives for reclose functionality in multi-layer film structures. Ideally used in blown-film technology, the products can be combined with both PE and PP, as well as PET.

- Cheese, Dairy, Deli Food Trays
- Fruit and Vegetables
- Snacks and Biscuits
- Cookies, Bakery, and Confectionery

Complete Solutions:

We also offer all of the components for a typical structure including PE, Tie Layer, EVOH and rPE.
